

# JOHN MICHAEL MACARAIG

Full Stack Developer

## CONTACT

-  0960-694-8217
-  San Pablo City, Laguna
-  john.michael.macaraig.1437@gmail.com

## TECHNICAL SKILLS

- **Backend Development:**
  - .NET Core /MVC , C#, Vanilla PHP
- **Database Management:**
  - MS SQL Server, PostgreSQL, Entity Framework
- **Frontend Technologies:**
  - React JS, Bootstrap, HTML5/CSS3
- **Tools & Versioning:**
  - Git, Visual Studio, VS Code, SSMS

## EDUCATION

**Bachelor of Science in Computer Engineering**  
STI College San Pablo | 2015-2020  
San Pablo City, Laguna

## ABOUT ME

Full Stack Developer with 4 years experienced specializing in the .NET ecosystem and Vanilla PHP. I have a proven track record of building scalable web applications using ASP.NET Core, C#, and MS SQL Server, alongside experience with PostgreSQL. I focus on Clean Architecture, Asynchronous RESTful APIs, and complex role-based workflows. Skilled in bridging the gap between robust backend logic and responsive JavaScript/AJAX frontends, with hands-on experience in on-premises IIS deployment.

## EXPERIENCE

### Full Stack Developer

*Brother Industries Philippines Inc.*

June 2022 - Present

- **Automated Business Operations:** Transformed manual workflows into automated .NET applications and desktop applications, significantly increasing operational efficiency and data integrity across enterprise systems.
- **Architecture & Requirements Analysis:** Translated complex business requirements into scalable system architectures and technical specifications, utilizing Clean Architecture principles.
- **End-to-End Development:** Engineered and maintained high-performance web and desktop applications using ASP.NET Core, C# and PHP ensuring long-term reliability and code maintainability.

# PROJECTS | FULL STACK DEVELOPER

## *In-House Support Ticketing System*

ASP.NET Core Web API, React, MS SQL Server, EF Core

- **Full-Stack Development:** Built a responsive ticketing platform using ASP.NET Core Web API (C#) and React, managing the complete request lifecycle from submission to closure.
- **Business Logic & Security:** Implemented Role-Based Access Control (RBAC) and server-side validation to manage permissions for Managers, Developers, and Testers.
- **Data Management:** Optimized data persistence with MS SQL Server and Entity Framework Core, using LINQ to engineer a custom real-time audit trail for all status changes.
- **System Features:** Developed secure multi-attachment file handling using IFormFile and integrated AJAX/JSON communication for seamless, no-reload state transitions.

## *iPORTAL System*

C# WinForms (MVC), MS SQL Server,

- **Full-Stack Development:** Architected a centralized desktop gateway using WinForms (C#) under an MVC pattern, providing a high-speed, unified interface for 4,000+ users to manage and launch enterprise systems.
- **Business Logic & Security:** Integrated Active Directory (DirectoryServices) and SQL Server to enforce Role-Based Access Control (RBAC) and secure session management with automated logout protocols.
- **Data Management:** Engineered a high-performance Real-time Search Engine using asynchronous programming (async/await) to dynamically filter system catalogs and technical documentation without freezing the UI.
- **System Features:** Developed an Enterprise Administrative Suite for real-time configuration management and created a custom-themed UI using GDI+ or custom CSS-like styling to achieve a specialized "Windows XP-meets-Steam" aesthetic.

## *Task Management System*

ASP.NET Core Web API, React, JavaScript, SQL Server

- **Full-Stack Development:** Engineered a scalable architecture using ASP.NET Core Web API and React (JavaScript), ensuring high-integrity data persistence and high-speed communication between the frontend and backend.
- **Business Logic & Security:** Implemented Service Worker registrations to manage background synchronization, ensuring that data remains consistent and the application stays reliable during intermittent connectivity.
- **Data Management:** Optimized the backend with SQL Server to support complex relational data and high-concurrency requests, maintaining strict data integrity for enterprise-level operations.
- **System Features:** Developed an offline-ready notification system using the Web-Push API, enabling real-time browser alerts to keep staff notified of new assignments even when the application is inactive.

## *Training Management System*

Vanilla PHP, Bootstrap, HTML, MS SQL Server

- **Full-Stack Development:** Engineered a dynamic training platform using PHP and MS SQL Server, featuring a custom logic engine to route requests through a multi-tier (Supervisor/Manager/PIC) approval workflow.
- **Business Logic & Security:** Implemented robust session management and iPortal synchronization, ensuring secure user authentication and state persistence across all modules.
- **Data Management:** Optimized data retrieval using complex SQL JOINS and Active Directory integration to deliver personalized employee training histories and departmental records.
- **System Features:** Developed a responsive, dark-themed enterprise dashboard using Bootstrap 5 and SweetAlert2, utilizing SQLSRV transactional logic to ensure data integrity during high-volume updates.

## *Budget & Indirect Material Management System*

ASP.NET Core MVC, React JS, PostgreSQL

- **Full-Stack Development:** Engineered a modern web application using ASP.NET Core MVC and React, featuring a custom Single Sign-On (SSO) integration to bridge authentication between Windows-based .NET iPortal and PHP environments.
- **Business Logic & Security:** Streamlined budget control by implementing a multi-stage Automated Approval Workflow (Budget Controller to Senior Management) with real-time status tracking and cross-database authentication.
- **Data Management:** Architected a collision-resistant Transaction Engine (Date-Timestamp-Counter) to manage high-frequency requests, alongside a Data Analytics view for forecasting monthly consumption patterns.
- **System Features:** Designed a high-performance, responsive interface using a Slate Blue dark-themed palette, optimized for warehouse staff to reduce navigation errors and improve inventory management efficiency.
